A comment on language

“**Do** state the name of the language that is being studied, even if it's English. Acknowledging that we are working on a particular language foregrounds the possibility that the techniques may in fact be language specific. Conversely, neglecting to state that the particular data used were in, say, English, gives [a] false veneer of language-independence to the work. ([Bender 2011:18](#))”

My examples are in **English** and **German**

I want to go further than Bender – there are **multiple ways** of thinking about and **categorising** the world (see e.g. [Burenhult et al. 2017](#))

Let's start with a motivating example

Imagine a query of the form...

<beautiful mountains> <near> <Zermatt>

Requires methods to deal with queries of form

<theme><spatial relationship> <location>

Multiple research challenges include...

<beautiful mountains><near><Zermatt>

Capturing multiple perspectives on concepts: what is a <beautiful> mountain?

“...von einer geplanten **künstlichen Erhöhung des Fletschhorns** zum Viertausender, einem Unternehmen, das heftige Diskussion ausgelöst hat. Während der **Gemeindepräsident für eine Erhöhung des Gipfels** und damit auch für einen **Zuwachs an Bedeutung plädierte**, zumal der Berg nur durch Erosion die Fehlenden sieben Meter von seiner ehemaligen Höhe verloren habe, **wandten sich die Umweltschützer** strikt dagegen, da sie die “**unberührte Natur**” gefährdet sahen.”

Munz, 2001, pp. 19

<beautiful mountains><**near**><Zermatt>

Spatial language

STATISTICALLY SPEAKING, IF YOU PICK UP A SEASHELL AND DON'T HOLD IT TO YOUR EAR, YOU CAN PROBABLY HEAR THE OCEAN.

**Context dependent
nearness to ocean**

Identifying toponyms

Was steht nun auf den Thurgauer Landkarten?

Von Christof Widmer. Aktualisiert am 24.09.2009

Im Streit um die Schreibweise der Thurgauer Orts- und Flurnamen wird es eng. Die neuen Karten gehen bald in den Druck.

(Bild: Tom Werner)

Artikel zum Thema

► [Wenn die Karte Velofahrer total verwirrt](#)

Kleinere Auflage als Lösung

Da die Neuauflage der Kartenblätter kaum aufgehalten werden kann, steht eine pragmatische Lösung im Raum: Es könnte eine kleinere Auflage gedruckt werden, die

Die Vorbereitungen im Bundesamt für Landestopografie (Swisstopo) sind schon weit gediehen. Die Luftaufnahmen vom Thurgau sind gemacht. Die neusten baulichen Veränderungen können so für die Neuauflage der Thurgauer Kartenblätter der Landeskarte berücksichtigt werden. Die elf Blätter der Karte im Massstab 1:25'000, die den Kanton abdecken, werden nächstes Jahr neu gedruckt. Ein Jahr später folgen die Karten im Massstab 1:50'000. Die in der Karte verzeichneten Orts- und Flurnamen übernimmt das Bundesamt vom Thurgauer Amt für Geoinformation.

Hier liegt das Problem: Wie die Lokalnamen im Thurgau geschrieben werden sollen, ist inzwischen

1. Same referents can be referred to by **multiple toponyms**
2. Referents can be **spatially vague**
3. Toponyms may be used **vernacularly**
4. Toponyms **are not constant** in time or space

Resolving toponyms

Land down blunder: teen heading to Australia lands in Sydney, Nova Scotia

Milan Schipper ended up in a snowy city 10,000 miles from his intended destination - and he's not the first tourist to make the mistake, even on his flight

Aside on research questions

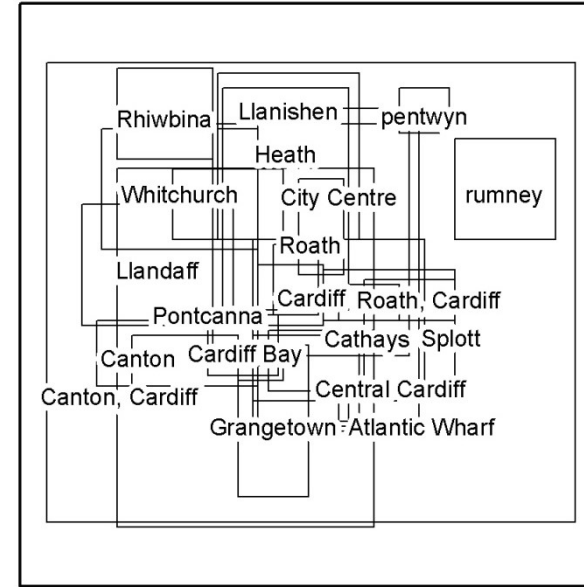

Research questions **matter** – here we posed the following

- How can **natural landscape descriptions ... be linked to footprints?**
(**methodological** – toponym recognition & resolution)
- **What natural features occur** in Swiss alpine descriptions?
(**descriptive** - ranking)
- How are **different alpine landscapes** described by natural features?
(**comparative** - similarity)
- Our underlying aim was to use text to “**do**” **geography**

Spatial relationships mined from GumTree

City

Let's introduce a new text

“Till the Union made them acquainted with English manners, the culture of their lands was unskilful, and their domestic life unformed; their tables were coarse as the feasts of Eskimeaux, and their houses filthy as the cottages of Hottentots.”

Samuel Johnson's *A Journey to the Western Islands of Scotland*, published in 1775, is both an early example of **travel writing** and a remarkably detailed piece of **cultural anthropology**. It records a journey made by Johnson and his friend and biographer, James Boswell, in the summer and autumn of 1773. Johnson was then 63 years old, and had rarely travelled outside London: the Scotland he describes is a **remote and alien place** in which everything he experiences, from the **lack of trees to the windows of Scottish houses**, is seen as evidence of the country's uncivilised state. His descriptions of a country still adjusting to the effects of the Highland clearances are **vivid, opinionated and wide-ranging**, encompassing subjects such as the Gaelic language, the primitive nature of Scottish shoes, and the consumption of whisky before breakfast.
